SMALL REORG (SCHID=34/2/4)

FREQUENCY

This schedule contains all jobs which run during the small reorg schedule – primarily reorganizations of around thirty databases. In addition to the reorg jobs, this schedule also includes the monthly "closed-case" processing (which moves inactive data to the "closed" partitions of the case and individual databases) as well as GHM330 (the monthly notice purge program for certain notice types over a year old.). The first two job in the schedule are CEPCAGEN/CEPCAJOB (change accum jobs) which run as SCHID=34. CEPCAJOB then triggers CEPREORG with a trigger ID of SCHID=2. CEPREORG is the dummy job that triggers the majority of the schedule. Most of the remaining jobs run as SCHID=2 with the exception of dummy job CEPDYCLA (and its subsequent jobs) which are triggered by CEPREORG with a trigger ID of SCHID=4. CEPDYCLA has a dependency upon another dummy job, CEPREND2, which indicates that all the reload jobs are complete. Please review the flow diagram for a complete list of jobs in this schedule.
